ALAVIA AI

Your health, in your language.

A voice-first AI health partner for Nigeria. Say what is wrong in English, Pidgin, Yoruba, Hausa or Igbo, and Alavia tells you what to do next.

Live MVP **alavia-ai.vercel.app**

Team NIBBLE

Alavia means health route

Part 1

Root

Ala

From Alafia, Yoruba for health, wellbeing and peace

Part 2

Via

The route, the way to the right care

Together

Alavia

A health route, from symptoms to the right care

What the name stands for

- Alafia: wellbeing and peace of mind
- Via: the way to the right care
- A route from symptoms to action
- Said and heard in five Nigerian languages

How it shows up

- Voice-first, in your language
- First-aid steps for the moment
- Hospitals ranked for your case
- A follow-up after every check

When something feels wrong, most people are left to guess

Most digital health tools assume English, typing and a clear sense of how serious a symptom is. Real life is messier.

“Is this serious? Where do I go?”

1. **Language barrier**
   Hard to explain a concern in a second language
2. **Text-heavy screens**
   Typing and reading shut people out
3. **No sense of urgency**
   Waiting too long, or the wrong next step
4. **Chatbots stop at talking**
   An answer, but no action
5. **The wrong facility**
   The nearest hospital is not always the right one

One journey, from “something is wrong” to “I know what to do next”

1

Speak

Describe it by voice or text, in your language

2

Ask

Targeted questions, one at a time

3

Assess

Red flags checked. Urgency from Low to Critical

4

Guide

Safe first-aid steps for the moment

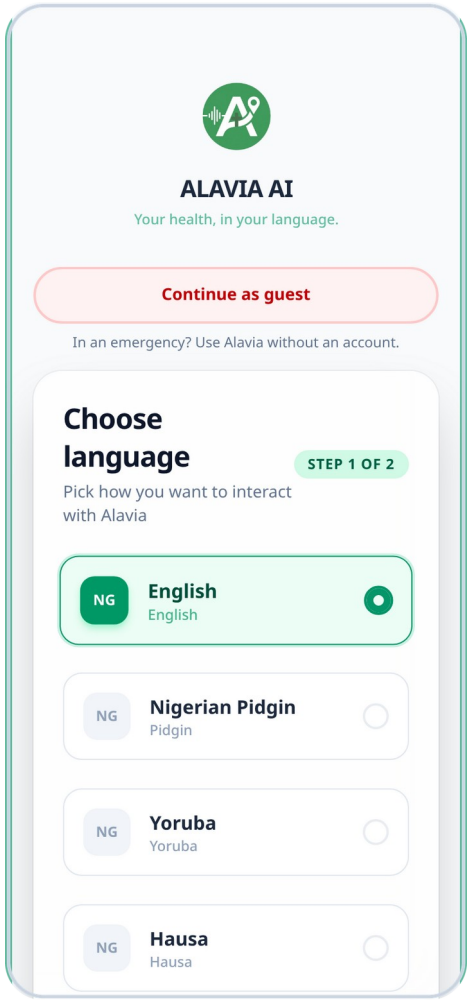

5

Route

The nearest suitable hospital, on a map

Not a doctor. Not an emergency service. Alavia is the first point of guidance, and it sends serious cases to professional care.

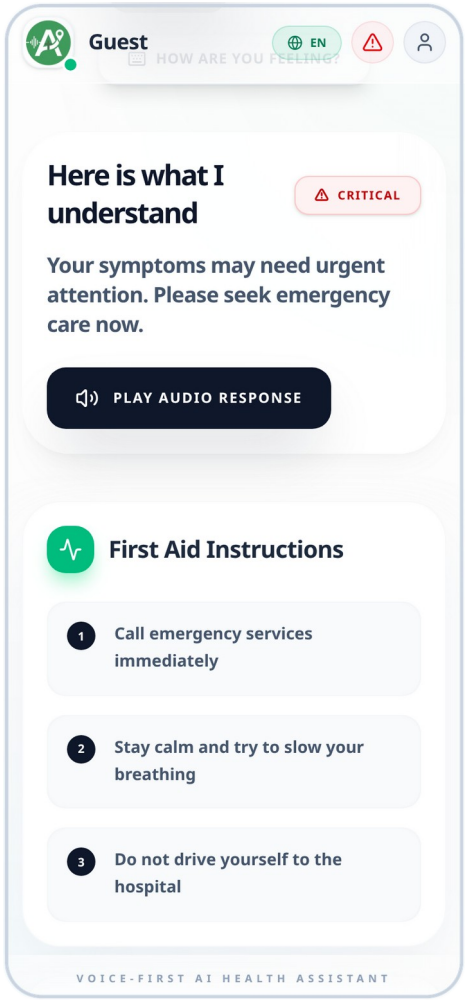

Live today: the whole journey, end to end

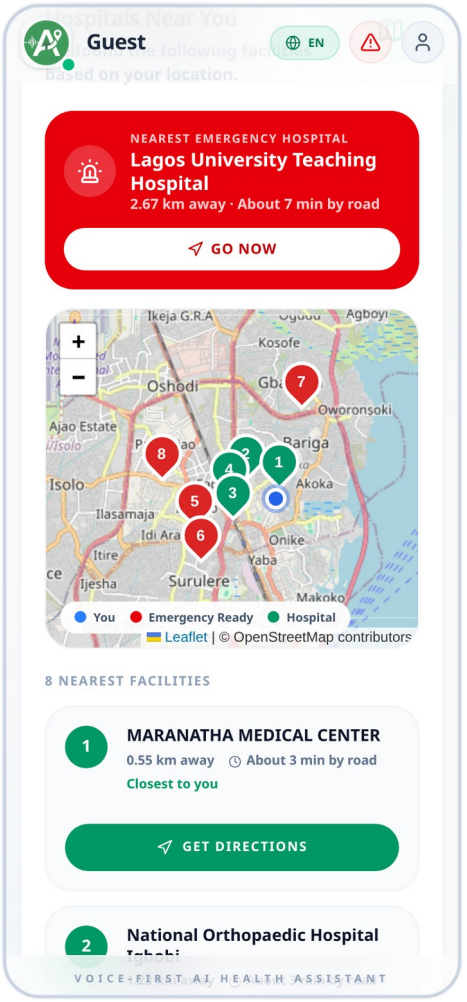

Pick your language

The whole app speaks it

Urgency and first aid

Nearest emergency hospital

What’s new in the app

Result screen

Shipped

First aid first

What to do comes before hospitals, for every severity

Voice

One voice, faster

First sentence plays as soon as it is ready

Input

A bigger mic

Tap or Hold, with the mode always visible

On the result screen

- First-aid steps first, hospitals second
- No reply bar once the check is done
- Hospitals ranked by distance and capability
- Feedback and follow-up check-in

Across the app

- English, Pidgin, Yoruba, Hausa and Igbo
- Only one voice speaks at a time
- Voice speed 1.1x by default
- Old audio never plays over the next question

Safety first, conversation second

Four urgency levels

Low — Stable, no major warning signs

Medium — May need care soon, not an emergency now

High — Could be serious. Needs urgent assessment

Critical — Possible emergency. Get professional care now

Red flags escalate at once

Trouble breathing, chest pain, heavy bleeding, collapse and stroke signs are recognised in English, Pidgin, Yoruba, Hausa and Igbo.

It checks back on you

Later, Alavia asks how you feel now. Answer “worse” and emergency help opens straight away.

Never a diagnosis

No prescribing and no dosing. The limits are stated plainly to every user.

Free for people, funded by the healthcare system around them

Who it serves

- Individuals and families
- Hospitals and clinics
- HMOs
- Employers and universities
- NGOs and community programmes

First market: Lagos pilot

How it earns

Hospital partnerships

Verified profiles and better patient discovery

Hospital software

Navigation, intake, referrals and analytics as a subscription

Institutions

HMOs, employers, universities and NGOs offer Alavia to their people

Consumer access

Free or very low cost, so reach stays wide

Start in Lagos, then grow through hospitals and communities

Stage 1

Built today

AI health companion

Understand symptoms, ask the right questions, set urgency

Stage 2

Healthcare navigation

Verified hospitals, clinics and professionals

Stage 3

Access ecosystem

Hospitals, HMOs, employers and NGOs on one trusted platform

What the pilot proves

- Adoption and repeat use
- Voice usability in each language
- Triage and routing quality
- Hospital partnerships and trust

How people find us

- QR codes and posters in partner hospitals
- Schools and universities
- Churches, mosques and youth groups
- NGOs and community health workers

Planned: our own voice, working offline

Next

Planned

Our own voice

A voice model trained with native speakers

Then

Works offline

Triage on the phone with Gemma 4

Always

One voice identity

The same voice in the app and our product video

How we get there

- Recruit and pay community voice contributors
- Record native speakers in all five languages
- Train and test the voice language by language
- Replace third-party text-to-speech APIs

Why it matters

- Faster: no trip to a third-party API
- Offline: location plus stored hospital data
- First-aid content kept on the phone
- Today it is online, as every API is

alavia-ai.vercel.app

From “something is wrong” to “I know what to do next”

5 languages	English, Pidgin, Yoruba, Hausa, Igbo
Voice-first	Speak or type, in your language
Emergency-ready	Guest access with no sign-up, and a nearest-hospital map
It checks back	Follow-ups and feedback after every assessment

Next: a Lagos pilot with partner hospitals
